Consumers' expectations

Telephony and navigation solutions bought in piecemeal fashion are a thing of the past. Customers no longer know where they stand when it comes to compatibility between the kits, phones and navigation software, not to mention the complexity and high cost of fitting them in the car. Consumers are looking for an easy-to-use turnkey solution that simultaneously combines the usual functions of their mobile phone with all the features of GPS and onboard navigation.

An all-in-one navigation and telephony solution

The CK3300 Navigation Pack is a complete telephony and navigation solution, optimised with a combined GPS car kit, a Nokia Series 60 smart phone - the most coveted in today's market! - and the Route 66 navigation software. It is the all-in-one pack for onboard navigation and telephony.

Extra safety...

The navigation pack lets you call from the car while using the navigation software to get your bearings, all of which with the greatest emphasis on simplicity, since phone calls and navigation instructions are played over the car's speakers. It stands as a professional solution, as it is fully integrated in the car's stereo system. The result is that drivers keep their hands on the wheel, which helps to cut down on the risk of accidents.

An LCD screen display

The menu and the various functions given verbally by the kit can also be displayed on the LCD screen. This allows for even greater ease in using your personal data, as the screen becomes a real extension of the mobile phone.

A Bluetooth® wireless solution

The Bluetooth® wireless technology enables your phone to communicate with the kit and the navigation software within a 10m radius. As soon as the driver enters the car, the wireless kit takes over from the phone and calls can be made while driving in complete safety.
